### Hip Dysplasia (HD)

Two methods of hip testing are done in the United States: PennHip and OFA.

**PennHip:** This method recommends breeding only dogs with an above average score, so starting at the 60<sup>th</sup> percentile is recommended. The scores that correlate with the different percentiles may change as genetic progress is made from one generation to the next, moving the breed average towards tighter hips.

PennHip	2014	2013	2012	2011	2009
Total Dogs Tested(cumulative)	181	181	175	167	137
Minimum Score (tightest hips)	0.24	0.24	0.24	0.24	0.25
Maximum Score (loosest hips)	0.96	0.96	0.96	0.96	0.94
25th percentile	0.65	0.65	0.65	0.65	0.65
50th percentile	0.53	0.53	0.53	0.53	0.53
60th percentile	0.50	0.50	0.50	0.50	0.50
75th percentile	0.44	0.44	0.44	0.44	0.44

**OFA:** The Orthopedic Foundation for Animals (OFA) also maintains a registry for testing. Normal is considered excellent, good, fair, poor and borderline. Abnormal is mild HD, Moderate HD and severe HD. According to OFA, "There is no clear cut consensus between the radiologists to place the (borderline) hip into a given category of normal or dysplastic." The following are the cumulative statistics available on the Icelandic Sheepdog:

#### HD (Hip Dysplasia) Comparison of Various Testing Measures: (Provided by OFA)

OFA	FCI (European)	BVA (UK/Australia)	SV (Germany)
Excellent	A-1	0-4 (no > 3/hip)	Normal
Good	A-2	5-10 (no > 6/hip)	Normal
Fair	B-1	11-18	Normal
Borderline	B-2	19-25	Fast Normal
Mild	C	26-35	Noch Zugelassen
Moderate	D	36-50	Mittlere
Severe	E	51-106	Schwere

**Further comments:** The Icelandic Sheepdog ranks 48<sup>th</sup> out of 157 breeds per the OFA Hip Registry. The total number of evaluations is 356 with the percent considered excellent at 11.2% and the percent considered dysplastic at 17.7%. See Appendix C.

## Statistics overview and comments, health

### Optional Testing (Results Maintained by OFA)

Evaluations through December 2014

Registry	Rank	Evaluations	Percent Abnormal	Percent Normal	Percent Carrier	Percent Equivocal
ELBOW	110	111	.0	100.0	.0	.0
PATELLA	N/A	8	12.5	87.5	.0	.0

### Eye Examinations

The CERF and OFA registries registers those dogs certified free of heritable eye disease by members of the American College of Veterinary Ophthalmologists (A.C.V.O.) and collects data on all dogs examined by A.C.V.O. Diplomates. This data is used to form the CERF and OFA data bases which are useful in researching trends in eye disease and breed susceptibility. Until 2012, all of that information was maintained by CERF. Since late 2012, however, owners have been given a choice as to whether they would like data kept in the OFA or CERF databases. CERF does continue to send info to OFA for posting to each dog's individual entry in their database.

The A.C.V.O. Diplomat completes the CERF or OFA form and indicates any specific disease(s) found. Breeding advice is offered based on guidelines established for that particular breed by the genetics Committee of the A.C.V.O.

Regardless of the outcome of the dog's exam, the research copy of the CERF or OFA form will be sent to the CERF or OFA office where its information is entered into the database for that specific breed. This information is used in generating research reports, but the individual dogs' identities are confidential and never released.
